First Place
"Silver Concept XXI Century"
Bienal Nacional de Diseño 2017

Laser cutting, is one of the jewelry techniques that has been used for years but only exploited to make 2D pieces.

The great innovation of my project is that I take advantage of the accuracy and fidelity of laser cut, to make assemblies in all the pieces, and achieve three-dimensional and complex volumes, which start with simple folds and ended with articulated and unique pieces.

My main purpose is to enhance the beauty of Latin American textiles, in a curious and never seen before way.
